AI-Assisted Resume Creation

Final Prompt Used:
“Create a one-page professional resume using the following details:

Name: [Your Name]

Email: [Your Email]

Phone: [Your Phone]

Education:

[Your Education]

Skills:

[List your skills]

Projects/Experience:

[Details]

Use a clean, modern format with clear section headings.

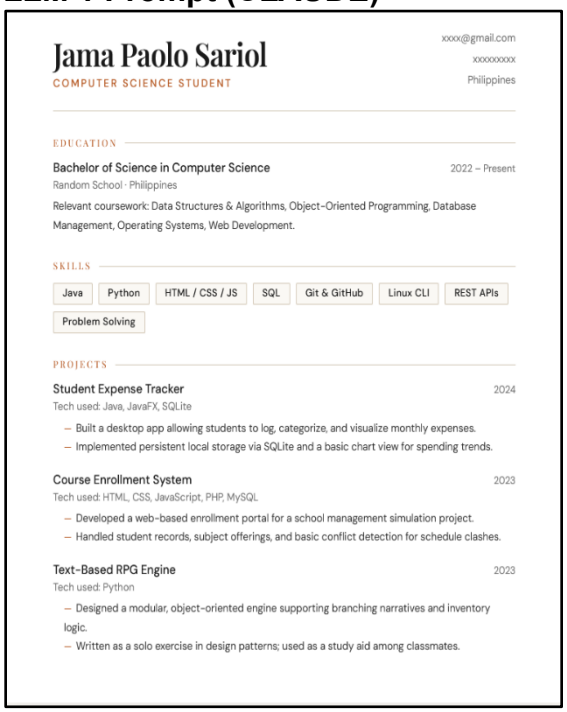
Keep it concise and suitable for entry-level job applications.

- Full Name – Jama Paolo Sariol
- Contact Information – xxxxxxxxx, xxxx@gmail.com
- Education – Random School
- Skills – Programming and a host of technical knowledge.
- Projects or Experience – basic student baby projects

here are the details to be filled out. make it up as you please”

here are the details to be filled out. make it up as you please”

LLM 1 Prompt (CLAUDE)



Jama Paolo Sariol
COMPUTER SCIENCE STUDENT

xxxx@gmail.com
xxxxxxxxx
Philippines

EDUCATION

Bachelor of Science in Computer Science — 2022 – Present
Random School · Philippines
Relevant coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Management, Operating Systems, Web Development.

SKILLS

Java | Python | HTML / CSS / JS | SQL | Git & GitHub | Linux CLI | REST APIs | Problem Solving

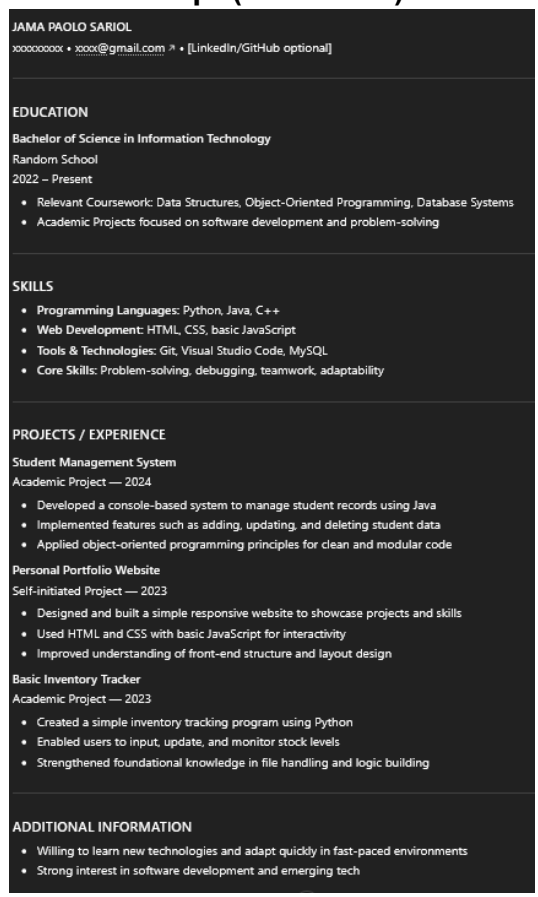
PROJECTS

Student Expense Tracker — 2024
Tech used: Java, JavaFX, SQLite
– Built a desktop app allowing students to log, categorize, and visualize monthly expenses.
– Implemented persistent local storage via SQLite and a basic chart view for spending trends.

Course Enrollment System — 2023
Tech used: HTML, CSS, JavaScript, PHP, MySQL
– Developed a web-based enrollment portal for a school management simulation project.
– Handled student records, subject offerings, and basic conflict detection for schedule clashes.

Text-Based RPG Engine — 2023
Tech used: Python
– Designed a modular, object-oriented engine supporting branching narratives and inventory logic.
– Written as a solo exercise in design patterns; used as a study aid among classmates.

LLM 2 Prompt (CHATGPT)



JAMA PAOLO SARIOL
xxxxxxxxx • xxxx@gmail.com ↗ • [LinkedIn/GitHub optional]

EDUCATION

Bachelor of Science in Information Technology
Random School
2022 – Present
- Relevant Coursework: Data Structures, Object-Oriented Programming, Database Systems
- Academic Projects focused on software development and problem-solving

SKILLS

- **Programming Languages:** Python, Java, C++
- **Web Development:** HTML, CSS, basic JavaScript
- **Tools & Technologies:** Git, Visual Studio Code, MySQL
- **Core Skills:** Problem-solving, debugging, teamwork, adaptability

PROJECTS / EXPERIENCE

Student Management System
Academic Project — 2024
- Developed a console-based system to manage student records using Java
- Implemented features such as adding, updating, and deleting student data
- Applied object-oriented programming principles for clean and modular code

Personal Portfolio Website
Self-initiated Project — 2023
- Designed and built a simple responsive website to showcase projects and skills
- Used HTML and CSS with basic JavaScript for interactivity
- Improved understanding of front-end structure and layout design

Basic Inventory Tracker
Academic Project — 2023
- Created a simple inventory tracking program using Python
- Enabled users to input, update, and monitor stock levels
- Strengthened foundational knowledge in file handling and logic building

ADDITIONAL INFORMATION

- Willing to learn new technologies and adapt quickly in fast-paced environments
- Strong interest in software development and emerging tech

Comparison Table

Criteria	LLM 1 Claude	LLM 2 ChatGPT
Structure	Easy to follow, well formatted, professional looking.	Same as Claude, but very cookie cutter.
Clarity	Excellent balance of font color and size, easy to see the important parts. Clear partitioning of the different sections without making it too distracting.	Minimalistic and easy to follow.
Formatting	Great formatting, subtitles are grayed out but noticeable, balance of font choices are great, visual hierarchy is amazing.	Very minimalistic and stripped down. Little graphical design, but it does not detract from the overall effectivity.

Overall Quality	Well made graphically speaking and structurally speaking. Design might be secondary when it comes to real life resumes.	A cookie cutter approach to making resumes, but nevertheless functional.

Reflection

Claude produced the stronger resume across all four criteria. Its layout felt polished and intentional - well-partitioned sections, balanced typography, and a visual hierarchy that guided the reader naturally. ChatGPT's output was functional but generic, the kind of template structure that blends into a pile of applications without standing out.

The sharpest difference was in formatting. Claude's use of grayed subtitles and varied font weights created visual depth without clutter. ChatGPT kept things minimal to a fault, sacrificing character for simplicity. Both, however, shared a common weakness: design that could overshadow content in practical settings like ATS scanning or plain exports.

That observation shaped the final resume. The goal became keeping Claude's structural clarity while trimming the heavier design choices, prioritizing readability and real-world usability over visual impressiveness. Additionally, the sections that ChatGPT added in its own version was mixed in, giving a result that gave the best of both worlds.

The biggest lesson came from prompting itself. Vague prompts produce vague results. Once the prompt included specifics - target role, tone, audience, the output improved noticeably. Prompting for a resume works best when treated like briefing a designer: context drives quality.

Final Resume Output

BS INFORMATION TECHNOLOGY · RANDOM SCHOOL

xxxx@gmail.com
xxxxxxxxx
Philippines

EDUCATION

Bachelor of Science in Information Technology 2022 – Present
Random School · Philippines

- Relevant coursework: Data Structures, Object-Oriented Programming, Database Systems
- Academic projects centered on software development and practical problem-solving

SKILLS

Languages
Python, Java, C++

Tools
Git, Visual Studio Code, MySQL

Web
HTML, CSS, JavaScript

Core
Problem-solving, debugging, teamwork, adaptability

PROJECTS

Student Management System 2024
Academic Project · Java

- Built a console-based system to manage student records, supporting add, update, and delete operations.
- Applied object-oriented programming principles for clean, modular code structure.

Personal Portfolio Website 2023
Self-initiated Project · HTML, CSS, JavaScript

- Designed and developed a responsive site to showcase academic projects and technical skills.
- Deepened understanding of front-end layout design and basic interactivity.

Basic Inventory Tracker 2023
Academic Project · Python

- Created a program enabling users to input, update, and monitor inventory stock levels.
- Strengthened foundational knowledge in file handling, data validation, and logic building.

ADDITIONAL INFORMATION

- Willing to learn new technologies and adapt quickly in fast-paced environments.
- Strong interest in software development and emerging tech.
